EDUCATION

BS Software Engineering

St Cloud State University • 2027 • 3.5

EXPERIENCE

Commercial Applications Business Analyst Intern

Inspire Sleep

May 2024 – August 2024, Golden Valley, MN

- Gathered insights on issues and areas for improvement within Microsoft Dynamics, Power BI, and Azure DevOps (ADO), driving actionable recommendations.
- Redesigned and standardized team documentation, ensuring alignment with project requirements and facilitating seamless knowledge transfer.
- Developed, executed, and reviewed test cases for functional and regression testing across multiple projects, enhancing test coverage.
- Performed thorough bug testing, delivering actionable insights to development teams and contributing to product quality improvements.

IT/AV Technician

St Cloud State University

November 2023 – Present, St Cloud, MN

- Facilitated seamless events at SCSU by managing sound, lighting, and other audio-visual setups, ensuring optimal experiences for over 500+ attendees
- Resolved technical issues promptly by troubleshooting hardware and software during live events, minimizing disruptions and maintaining high-quality service
- Collaborated with event organizers to align technical setups with their expectations, enhancing satisfaction and the overall success of events.

GIS/IT Intern

Three Rivers Park District

June 2022 – September 2022, Plymouth, MN

- Streamlined geographic data management by organizing and integrating field-collected information, ensuring accuracy and accessibility for analysis.
- Resolved helpdesk tickets efficiently, providing timely technical support and maintaining smooth office operations.
- Developed clean and user-friendly 360° virtual tours by splicing and optimizing data, enhancing the end-user experience.

PROJECTS

Accountant Meeting Website

HTML5, PHP, JavaScript, MySQL

- Lead a team within a SCRUM framework to develop a full-stack website from concept to deployment in just two months, ensuring timely delivery.
- Seamlessly integrated a MySQL database with an HTML5 front end using PHP and JavaScript, enabling dynamic and efficient data management.
- Enhanced GUI capabilities by implementing intuitive navigation and user-centric design elements, aligning with the 8 Golden Rules of usability to improve user experience and engagement.

Bowling for the Tempered Minded

Unity, C#

- Enhanced realistic physics in Unity, refining bowling mechanics to provide an authentic and engaging gameplay experience.
- Optimized game performance by fine-tuning assets and physics simulations, ensuring smooth and responsive gameplay across platforms.
- Collaborated on iterative design improvements, incorporating player feedback to refine mechanics and visuals.

Financial Tracking Program

Python, MySQL

- Developed a user-friendly financial tracking system using Python and MySQL within a 15-hour timeframe, delivering real-time insights into user spending habits and improving financial awareness.
- Conducted end-to-end testing to ensure accuracy in financial calculations and the reliability of real-time updates.

Red VS Blue Spaceship fighter

Python

- Developed a dynamic two-player spaceship fighting game using Python and Pygame, delivering an engaging and competitive multiplayer experience.
- Optimized game performance by refining code and reducing frame rendering times, achieving smoother gameplay on various devices.
- Tested and debugged game features extensively, ensuring stability and consistent user experience during gameplay.

Automatic Deodorant dispenser

C++

- Designed and built a physical device to detect body proximity and humidity levels, determining when deodorant application is necessary. Leveraged sensor technology to create a functional, user-centric solution.
- Demonstrated expertise in diagnosing and resolving complex issues during the physical implementation phase. Utilized strong troubleshooting abilities to optimize device functionality in a real-world environment, ensuring reliable and accurate performance.
